

Prototyping Services

CMC Microsystems provides state-of-the-art fabrication services through partnership with foundries and aggregators worldwide for prototyping designs in microelectronics, photonics, and electro-micro-mechanical systems (MEMS).

Commercial Fabrication Access

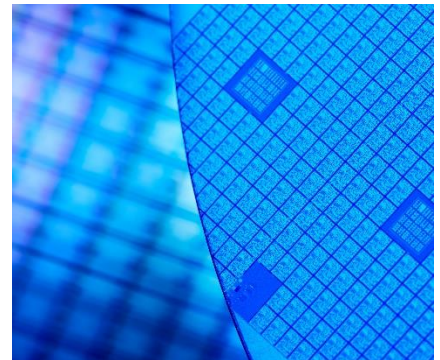

- Cost-effective multi-project wafer (MPW) services for a range of commercial chip fabrication
- Access to prototyping technologies in
 - Microelectronics down to 12 nm FinFET
 - Silicon Photonics
 - Electro-Micro-Mechanical Systems (MEMS)
- Process Design Kits, Design Rule Check (DRC)
- Hands-on training in entire design to fabrication cycle
- Options for dedicated engineering runs and full production wafers in different technologies

Support and Expertise

- Packaging and engineering support
- Custom fabrication and R&D services
- Network and expertise in advanced technologies

About CMC

CMC Microsystems has more than 35 years' in delivering multi-project wafer services across a range of technologies, including advanced microelectronics, photonics and MEMS. Based in Canada, CMC reduces barriers to technology adoption by providing access to design tools, prototyping, value-added packaging & assembly services and in-house expertise for first-time-right prototype.
